# Urine Drug Screen Testing

![Phoenix Center Logo](https://example.com/phoenixcenter_logo.png)

## What We Offer:

<table>
<thead>
<tr>
<th>Tests for:</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Instant Drug Screen</strong>&lt;br&gt;(Urine test with instant results)</td>
<td><strong>METH/THC/AMP/COC/OPI/PCP</strong>&lt;br&gt; $15</td>
</tr>
<tr>
<td><strong>Lab Drug Screen</strong>&lt;br&gt;(Urine test sent to a Lab; results in approx. 7 days)</td>
<td><strong>ALC/AMP/BAR/BZO/COC/OPI/PCP/THC</strong>&lt;br&gt; $30</td>
</tr>
</tbody>
</table>
| EtG<br>(Urine test sent to Lab; results in approx. 8 days) | **Additional $15**

### EtG

EtG is a direct metabolite of alcohol (ethanol). Its presence in urine may be used to detect recent ethanol ingestion, even after ethanol is no longer measurable. The presence of EtG in urine is an indicator that ethanol was ingested and can be detected in urine for up to **80 hours after ingestion**. In addition to EtG, recent scientific studies have identified ethyl sulfate (EtS) as a second specific metabolite or biomarker of ethanol. For this reason, our testing lab tests and reports EtS, in conjunction with EtG, to confirm recent ethanol ingestion or exposure. This test detects recent ingestion more accurately and for a longer period of time than standard alcohol tests and is ideal for zero tolerance treatment programs and abstinence enforcement.

### Bath Salts<br>(Urine test sent to Lab)<br> **Designer Stimulants**<br> **$75**

This test can detect many illicitly synthesized forms of stimulants sold online and in head shops nationwide. You can choose from two test panels: Expanded Designer Stimulant Panel or the MDPV & Mephedrone Panel. Presence of parent drug in urine confirms ingestion with an average detection window up to **24—72 hours**.

### Synthetic Cannabinoid<br>(Urine test sent to Lab)<br> **K2, Spice, and other synthetic cannabinoid**<br> **$50**

Synthetic cannabinoids are psychoactive chemicals that are often sprayed on herbal smoking material and referred to as synthetic marijuana. It is sold in the U.S. under brand names such as K2, Spice, and others. Users looking for a "legal high: often turn to these herbal smoking or incense products because they do not show up on a standard urine drug test. Presence of metabolites confirms ingestion with a detection window up to **72 hours** (depending on dosage).

## Drug Screening Hours:

- **Monday—Thursday:** 9:00am to 6:00pm
- **Friday:** 9:00am to 5:00pm

To enroll in Outpatient Services or speak with a counselor, call our appointment desk at (864) 467-3737 to schedule an intake appointment.
